

Table 5: NeuroGate – Fine-Tuning Summary on Selected-12 Datasets

Experiment	Result
LP channel-gated fusion mean gain (vs. backbone-only)	+0.0389 BA
LP gated fusion positive rate (dataset-backbone units)	40/48
CBraMod flatten-FT gated fusion mean gain	+0.0078 BA (9/12 positive)
FT best-of-gated/logit mean gain	+0.0097 BA

Note: The primary evidence for NeuroGate lies in LP, where gated fusion consistently improves over backbone-only. FT gains are smaller but remain positive on average.
